. . . . Replace with the latest version of the file. . . . To install this update, follow the instructions in Microsoft Knowledge Base Article 95785. The update is not applicable to the following products: Panasonic CF-29 Toughbook. . . . For details, see the "Product Compatibility Guide for Business Process System Document software" on the Product Compatibility Web site. . . . – The same can be done by unzipping the downloaded file and running a .exe file which is now contained in the downloaded file.

But these are NOT the newest updates. I suspect that the update is NOT an update. This is from the *Download Page* by Crivan The files can be opened by Ubuntu *Universal File Viewer* or any other Linux/Mac compatible file manager. I did my Windows XP Update this way and used an ISO image and the *Universal File Viewer*. It is a legitimate update! Here is how to update (Windows XP) when you are running on a CD or DVD or a mounted hard drive: 1. Go to Control Panel\Add or Remove Programs\Windows Update 2. Click on Show Updates 3. Find the update Microsoft Windows XP Service Pack 3 4. Right click and select Update 5. Click Proceed Now I know you need an optical disc. Or you can get Windows Updates on a CD or DVD or USB stick. But you must have it (and everything else) in the drive or optical drive. You can burn a Windows Update DVD or USB if you prefer that to a physical disc. I think the hard drive installation option is the best. If you need to boot from USB or DVD, then you need to do this. It is MUCH easier to have Windows Update on a USB stick than it is to have it on a CD. But you must have a CD or DVD or an optical drive. If you can boot to the CD/DVD, and then you click on Update in Control Panel\Add or Remove Programs\Windows Update 1. Click on Show Updates 82157476af
